

The 2025 Virginia School Safety Audit State and Regional Comparison

Since 1997, Virginia law has required all public schools to conduct annual school safety audits (*Code of Virginia* [§ 22.1-279.8](#)). The audit process assists schools and divisions in identifying and evaluating physical safety concerns and patterns of student and staff safety perceptions.

The Virginia Center for School and Campus Safety (VCSCS), a division of the Virginia Department of Criminal Justice Services (DCJS), in consultation with the Virginia Department of Education (VDOE), is responsible for developing the list of items to review and evaluate as part of the school safety audit required by the *Code of Virginia*. Additionally, VCSCS has established a standardized report format for school safety audits, reporting criteria, and procedures for report submission.

Since 2005, VCSCS has collected and shared school safety data for the annual School Safety Audit Program. The audit process is reviewed and updated regularly to maintain the data's relevance.

Two components of the School Safety Audit are the school and division safety survey(s), which are intended to provide schools, divisions, and DCJS with information on how best practices for school safety are being implemented across Virginia. The results of these surveys provide valuable information on training and resources needed across the state. These surveys are adjusted to reflect current trends and best practices and to gather data to inform policymakers.

Based on the results of the School Safety Audit, schools and divisions can develop responses and solutions to identify vulnerabilities. These may include recommendations for structural adjustments, changes to safety procedures, and/or revisions to the standards of student conduct. All data from the School Safety Audit is available to school divisions to assist with informing their practices and guiding decisions related to student and staff safety.

Further information regarding the components of the School Safety Audit, as well as copies of the survey instruments, can be found on the [DCJS website](http://www.dcjs.virginia.gov/virginia-center-school-and-campus-safety/virginia-school-safety-audit-program) at www.dcjs.virginia.gov/virginia-center-school-and-campus-safety/virginia-school-safety-audit-program.

The 2025 Virginia School Safety Audit State and Regional Comparison

This report compares state and regional data collected from the 1,952 traditional K-12 public schools operating in Virginia during the 2024–2025 school year. These schools comprise the 131 public school divisions that completed the division safety survey. According to the VDOE [Fall Membership database](#), there were 1,261,387 students enrolled in public schools during the 2024–2025 school year. All divisions and schools participated in the 2025 School Safety Audit.

Note: This report is intended to provide examples of the data collected to provide insight and comparisons for school leadership, school divisions, policymakers, and other school safety and security personnel. These are excerpts, as the entirety of the 2025 School Safety Audit is not available for public inspection to protect the confidentiality of sensitive information and potential security vulnerabilities, per the *Code of Virginia* [§ 22.1-279.8](#). Additional reports summarizing state-level results by item can be found on the [DCJS website](http://www.dcjs.virginia.gov).
